

Mariadb-Container mit adminer

<https://www.adminer.org/>

docker-compose.yml

```
version: '3.4'
services:
  mariadb:
    image: mariadb:latest
    restart: always
    ports:
      - 3306:3306
    #volumes:
    # - ./database:/var/lib/mysql
    environment:
      MYSQL_ROOT_PASSWORD: passme
      #MYSQL_ALLOW_EMPTY_PASSWORD: true
      MYSQL_DATABASE: db
      MYSQL_USER: user
      MYSQL_PASSWORD: user
  adminer:
    image: adminer
    restart: always
    ports:
      - 8080:8080
```

Starten / Stoppen / ...

```
docker-compose up -d
docker-compose logs
docker-compose down
```

beim Starten und Stoppen werden die Daten (Container) NICHT zerstört

```
docker-compose start
docker-compose stop
```

Öffnen des Adminers

<http://localhost:8080>
